DETAILED ACTION

Specification

The following guidelines illustrate the preferred layout and content for patent applications. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

The following order or arrangement is preferred in framing the specification and, except for the reference to "Microfiche Appendix" and the drawings, each of the lettered items should appear in upper case, without underlining or bold type, as section headings. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) Title of the Invention.
 - (b) Cross-References to Related Applications.
 - (c) Statement Regarding Federally Sponsored Research or Development.
 - (d) Reference to a "Microfiche Appendix" (see 37 CFR 1.96).
 - (e) Background of the Invention.
 - 1. Field of the Invention.
 - 2. Description of the Related Art including information disclosed under 37 CFR 1.97 and 1.98.
 - (f) Brief Summary of the Invention.
 - (g) Brief Description of the Several Views of the Drawing(s).
 - (h) Detailed Description of the Invention.
 - (i) Claim or Claims (commencing on a separate sheet).
 - (j) Abstract of the Disclosure (commencing on a separate sheet).
 - (k) Drawings.
 - (I) Sequence Listing (see 37 CFR 1.821-1.825).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Art Unit: 3761

Claims 7 – 12 and 16 – 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Roe (US 5,607,760).

Regarding claim 7, Roe discloses an absorbent article with longitudinally extending side extremities (figure 3), an absorbent body (540) disposed between a liquid-impermeable bottom sheet (530) and a liquid-permeable upper sheet (520) and at least one longitudinally extending elastic liquid barrier (550) of essentially liquidimpervious material as set forth in col. 8, lines 50 - 56 through the incorporation of Dragoo (US 4,795,454) which discloses barrier made of essentially liquid-impervious material in col. 10, lines 54 – 57. Dragoo also discloses a barrier fasted to the upper or bottom sheet along or adjacent to a respective side edge extremity of the article (col. 4. lines 39 – 47) and having a free sealing edge facing towards a wearer as set forth in figure 2. Likewise, Roe discloses an article in which at least the sealing edge is treated with a non-adhesive sealing medium which, in use, at least partly fills out any throughpenetrating prose which are formed between the sealing edge and an abutment part of a wearer's skin and/or which, when the article is donned, smears the abutment skin part and thereby increases a liquid-skin wetting angle as set forth in col. 10, lines 18 -21 and col. 25, lines 26 – 32.

With reference to claim 8, Roe discloses the article wherein the sealing edges are coated with a sealing medium in an amount sufficient to smear the abutment part as set forth in col. 25, lines 26 – 32. Further, since the structure of Roe provides a diaper with sealing edges coated with a sealing medium that is identical to the structure as claimed by the applicant, it should be understood that the structure of Roe is considered

Art Unit: 3761

fully capable of providing the function (i.e., sealing medium in an amount sufficient to partly fill out any pores) as claimed by the applicant.

With respect to claim 16, Schulte teaches the article wherein the sealing medium is essentially rigid and viscous at room temperature and sufficiently fluid at body temperature to smear the skin of the wearer as set forth in col. 9, line 50 to col. 10, line 17.

As to claim 17, Schulte discloses the sealing medium to be petrolatum as set forth in col. 15, lines 60 – 61.

Claims 18 and 19 are equivalent in scope to claims 7 – 8 and 16 and are included in the Roe reference.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 9 – 12 and 13 – 15, as best understood by the Examiner, are rejected under 35 U.S.C. 103(a) as being unpatentable over Roe (US 5,607,760).

As to claims 9 - 12, Schulte discloses an article with the sealing medium applied in the claimed amounts as set forth in col. 24, lines 1 - 6. While Roe states that the lotion composition is applied to the diaper topsheet in this amount, one of ordinary skill

Art Unit: 3761

in the art would have the motivation to apply this same concept to the leg cuffs of an absorbent article because Roe discloses the use of such in col. 25, lines 26 – 32.

With reference to claims 13 – 15, the applicant has disclosed on page 14 of the specification that petrolatum is a suitable sealing medium. Roe discloses the use of petrolatum in col. 15, lines 60 – 61. It can be reasonably assumed that the petrolatum would provide a sealing member meeting the wetting angle requirements of the claimed invention. Likewise, it would be obvious that the petrolatum would provide results similar to any other sealing member disclosed by the applicant, since the applicant has acknowledged that petrolatum is a suitable ointment.

Claims 20 – 21, as best understood by the Examiner, are rejected under 35 U.S.C. 103(a) as being unpatentable over Roe (US 5,607,760) and in further view of Sivilich (US 5,669,902).

The difference between Schulte and claim 20 is the provision that the absorbent article include an essentially liquid-impermeable top sheet which is intended to lie against a wearer and which includes elastic for shaping the article to the wearer's body, and includes apertures intended to lie in register with an anus and a urethra orifice of a wearer, around which apertures elastically puckered sealing edges are disposed in the top sheet.

Sivilich teaches an absorbent article including an essentially liquid-impermeable top sheet (30) which is intended to lie against the wearer and which includes elastic for shaping the article to the wearer's body (figure 4 and abstract) and includes an aperture intended to lie in register with an anus and a urethra orifice of a wearer, around which

Art Unit: 3761

apertures elastically puckered sealing edges are disposed in the topsheet as set forth in figure 4.

It would have been obvious to one of ordinary skill in the art to modify the absorbent article of Roe by employing an essentially liquid-impermeable top sheet which is intended to lie against a wearer and which includes elastic for shaping the article to the wearer's body, and includes an aperture intended to lie in register with an anus and a urethra orifice of a wearer, around which apertures elastically puckered sealing edges are disposed in the top sheet because the inclusion of such retains the garment in intimate contact with the body as taught by Sivilich in col. 1, lines 63 – 67.

Similarly, the use of apertures as opposed to an aperture would have been an obvious modification since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art.

Roe provides the general concept of providing lotion on the elastic edges that come into contact with the wearer's skin in order to alleviate chafing and provide improved containment. Therefore, it would have been obvious to one of ordinary skill in the art to coat any elastic member that comes into contact with the wearer's skin with the composition as taught by Schulte.

As to claim 21, see the rejection of claim 8.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michele M. Kidwell whose telephone number is 703-305-2941. The examiner can normally be reached on Monday thru Friday, 7:00am - 3:30pm.

Art Unit: 3761
